

CSF/PSF data package

Preparation summary

For *Intrinsic Organization of Contrast Sensitivity in Human Vision*

Saved in your requested folder

C:\Users\alexz\Personal_Folder\Git_Folder\
PNAS_Psychophysics_data

All **611 copied files** match the validated preparation copy. Your original data and code remain unchanged. Nothing has been uploaded or published.

What is included and checked

Contents or check	Result
Subjects and conditions	Four correctly mapped manuscript subjects; 31 luminance/subject conditions. The excluded participant is omitted.
Raw data and staircases	41,606 trials; all 16 source numeric columns preserved. 804 staircases recorded, with 802 included. Excluded records remain flagged.
Primary CSF points	All 255 reproduce exactly from the raw trials.
Saved PSF fits and summaries	All 310,000 saved rows preserved, including excluded values. All 31 means and percentile intervals reproduced.
Saved CSF inputs	310,000 original files consolidated into 31 compressed tables. Every original file checksum verified by reconstruction.
Code and documentation	Analysis, plotting, diagnostic model replay, dictionary, provenance, environment, manifests and six verification figures.
Standalone execution	The full documented workflow passed from a separate copy in 61.5 seconds.
Source preservation	All 476 inventoried source records rechecked without content changes.

Your additional staircase script confirms the median of the final eight detected reversals, followed by averaging thresholds across staircases. This is reflected in the code, tables and staircase notes.

Where to start, and what remains

Item	Purpose / location
Complete package ZIP	PNAS_Psychophysics_data.zip - 35.4 MB. The same package saved in your requested folder.
README	README.md - contents, conventions and reproduction instructions.
Validation report	VALIDATION_REPORT.md - verified results and remaining scientific discrepancies.
Author questions	AUTHOR_QUESTIONS.md - concrete items to resolve before public release.
Submission guidance	JOURNAL_DATA_CHECKLIST.md and DATA_AVAILABILITY.md - data-package checklist and proposed manuscript wording.

The named .md documents are in the main package folder. The ZIPs and this PDF are in the separate preparation outputs folder.

Before submission or public release

This is a completed **CSF/PSF preparation package for author review**. The saved distributions and their summaries are preserved and checked. Exact historical bootstrap regeneration remains unresolved: current scripts differ from the selected saved analysis, and sampled same-index refits frequently disagree with saved PSF rows.

The model replay also exposes differences in the luminance transformation, fitting targets and added constraints. These findings are documented without changing the archived results.

Review the author questions, reconcile the relevant methods and final figures, and finalize licenses, sharing permission and repository metadata. A complete Figure 1/Figure 4/SI computational deposit remains outside this CSF/PSF package. The checklist does not mark these or unrelated submission requirements complete.

Private provenance - keep separate

PRIVATE_provenance_DO_NOT_UPLOAD.zip contains the original participant mapping, private source paths and acquisition linkage, source checksums, and copies of supplied context/code materials. **Do not upload this archive.** It is outside both the public-candidate ZIP and your requested Git-folder package.

checksums.sha256 records SHA-256 hashes for both ZIP archives. Both archives were read back and checked against their source files.

This PDF is a readable companion to Preparation_summary.md. The separate *Guide to your CSF/PSF data folder* explains the folder, terminology, workflow and journal-readiness assessment.
